SYERA ProjectGrid

Integrated digital project management

Connect site supervision, equipment movements and project reports in one workspace for civil and structural engineering teams.

CIVIL & STRUCTURAL ENGINEERING

Sabah district map

Demonstration edition

Modules and functions

From the first work package to project handover.

Portfolio & progress

Project register
Filter by district, project lead and delivery status.

Dashboard & status
Compare reported progress with the planned target.

Sites & equipment

Operations map
Explore districts and open the details for a project site.

Equipment Management
Replay GPS history and inspect entries and exits.

Site supervision

Work & site diary
Track work packages and record daily site activities.

Drawings & inspections
Review drawing revisions, inspections and handovers.

Issues & evidence

Technical issues & RFIs
Assign queries to an officer and monitor due dates.

Field audits & photos
Keep audit findings, actions and photos together.

Resources & claims

Assets & maintenance
Review equipment use and maintenance history.

Staffing & claims
Review staff assignments and project claim records.

Reports & access

Project reports
Choose an assessment date, then print or export.

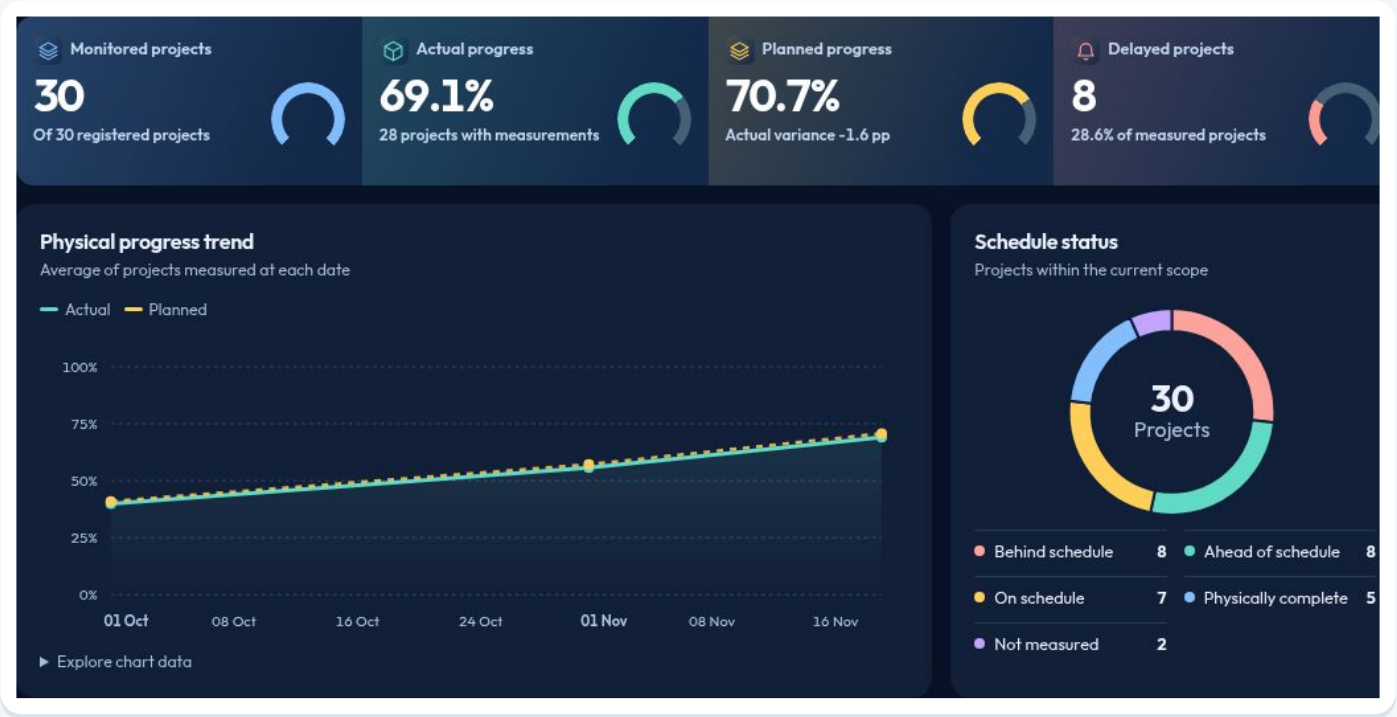

Roles & master data
Manage access and maintain project registers.

Five demo roles

Superadmin, Project Manager, Site Supervisor, Field Auditor and Asset Manager.

Project dashboard

Compare physical progress with the plan and identify projects that need a closer look.

Dashboard at the 19 November 2026 assessment.

Which projects need attention?

Eight of the 30 projects are behind schedule. Two are awaiting their first progress reading.

Projects by schedule status

8	8	7	5	2
Behind schedule	Ahead of schedule	On schedule	Physically complete	Unmeasured

Choose an assessment date

Read the trend using the measurements available on that date.

Open the project behind a chart

Select a chart value to inspect the contributing projects and their reports.

Operations map

Locate sites across Sabah by district, work category and schedule status.

Sabah operations map with the Building category selected.

From map marker to site record

SITE / GEO-02

SAN Tamparuli

Tuaran, Sabah

6.1300° N 116.2700° E

Building / Block A

Filter the map

Display the sites that match the type of work and status under review.

Select a site

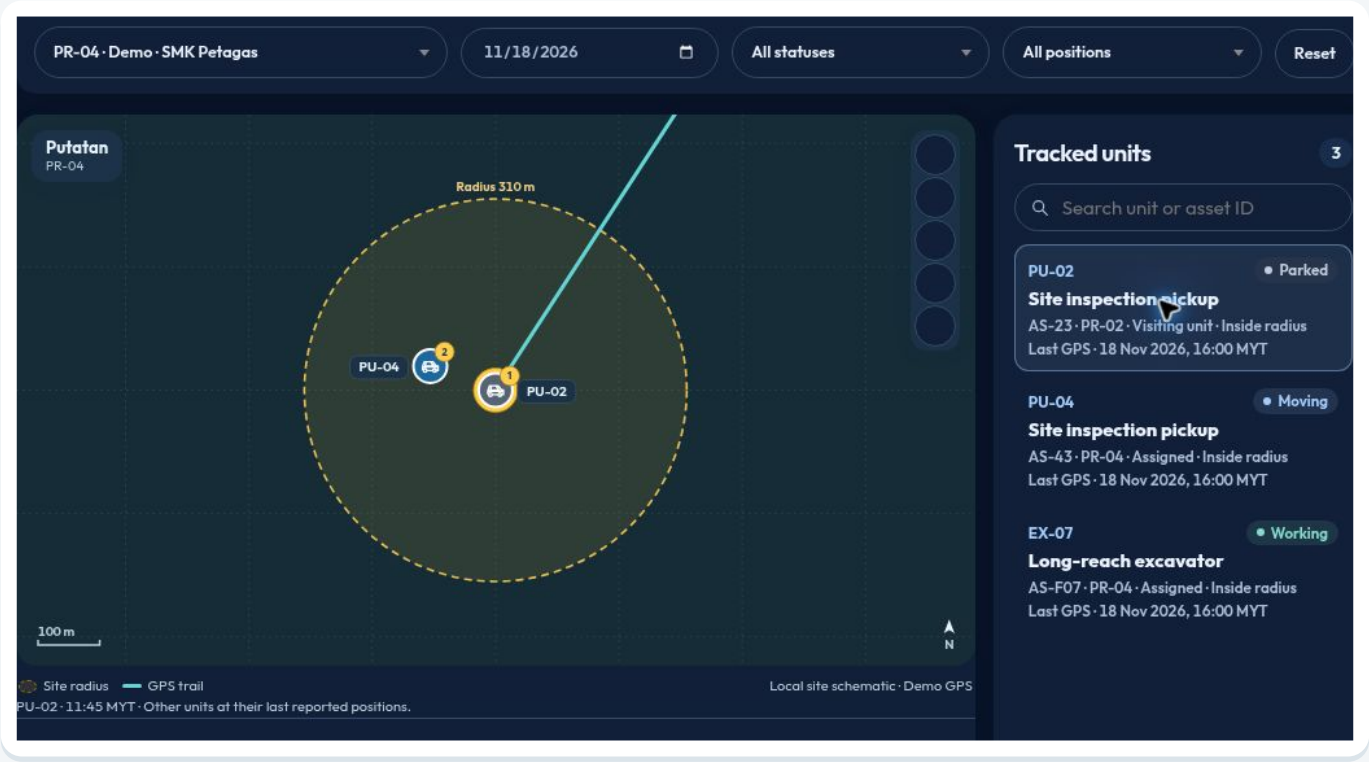

Read its coordinates and compare actual progress with the target.

Open its report

Inspect recorded measurements and the technical issues linked to that project.

Equipment Management

Review the last recorded position of machinery and replay movement between project sites.

PU-02 in the 310 m Petagas site radius at 11:45 MYT on 18 November 2026.

One pickup, two project sites

Four GPS readings show when PU-02 crossed the site boundaries on 18 November. All times are local to Sabah.

GPS readings

Demo GPS records from 17–19 November 2026.

Progress and field audit reports

Bring progress, technical queries and photographic evidence into the same project review.

Jalan Mesej Sapang Kunak at 19 November 2026, 8.45 percentage points behind plan.

A field finding at KM 2+400

Culvert / Demo image

AUD-01 / 16 OCT 2026

Culvert level discrepancy

The culvert invert level differs from the longitudinal profile. Installation is on hold pending confirmation.

The auditor recommends comparing the survey readings with the profile and referring them to the design engineer.

Print and export

Print the formatted report or save it as a PDF. Export the underlying report data to Excel or CSV for further review.
